

# One Platform, Three Business Units: QVW Powers Unified Signal Surveillance for a Top-10 Pharma

## Challenge

The client, a Top 10 pharma, sought to standardize and improve safety surveillance across their Pharma, Vaccine, and Consumer Health units. Their challenges included:

- Consolidation of vaccine and pharma signal teams.
- Facilitation of the divestment of the Consumer Health division.
- Integration of multiple public and in house data sources.
- Complex data migrations from legacy applications.
- Displacing established methods and in-house data visualization solutions.
- Simplification of the IT landscape.

To achieve these goals, the client needed a robust end to end solution capable of handling complex data integrations and supporting a unified signal detection and management process across diverse business units.

## Approach

The client selected Qinecsa's Vigilance Workbench (formerly Commonwealth Vigilance Workbench, now QVW) due to its innovative approach to signal detection and tracking, its integration capabilities with FAERS and EVDAS data, and the proactive partnership offered by the QVW team.

To address the challenges, the project was structured into a two-phase deployment plan. This phased approach minimized the time to benefit and allowed gradual uptake across different units.

A comprehensive strategy ensured seamless data migration and integration, involving meticulous planning and execution. All QVW modules, including QVW Analytics, were deployed, and the system was configured to facilitate the future separation of the Consumer Health business.

## Outcome

Timely deployment of QVW supported the client's strategic objectives and resulted in significant benefits for the client, including:

- Increased operating efficiency through unified signal processes.
- Successful combination of the Pharma and Vaccine operating units.
- Enhanced process visibility and improved audit readiness.
- Significant simplification of the in-house IT landscape.

By adopting QVW, the client was able to standardize their safety surveillance practices and streamline their operations, positioning them for future success in a highly competitive industry.

---

**Qinecsa continues to support the client, and we look forward to continuing our collaboration to drive further efficiencies and innovation together.**
