

Streamlined Literature Screening and Improved Compliance at Scale

Challenge

A Top 5 global Pharmaceutical Company faced challenging complexity in managing literature surveillance at scale. The team received approximately 35,000 literature abstracts every month, creating a significant operational burden for screening and case documentation.

Key challenges included:

- Manual screening of literature abstracts and ICSR book in processes.
- Heavy reliance on excel based tracking for workflow management.
- Fragmented archival structure for literature documentation.
- Increased risk of manual errors and potential compliance gaps.

Approach

The organization implemented a centralized literature management platform with Qinecsa's support for:

- Automated duplicate search and de duplication of literature records.
- Streamlined literature citation review and ICSR book in workflows.
- Structured archival system supported by a complete audit trail.
- Real time workflow and quality monitoring
- Oversight and reporting dashboards for the management

Outcome

This approach enabled Qinecsa literature review and ICSR book in team to transition from manual process to an automated and scalable literature surveillance process.

The new solution reduced manual efforts, strengthened documentation quality and regulatory readiness. It also improved operational transparency and future scalability.

Qinecsa continues to support the client, and we look forward to continuing our collaboration to drive further efficiencies and innovation together.
